Pentesting for All with Cobalt

Overview

If you've been through the traditional pentesting process before, then you know first-hand how inefficient it can be: long lead times, dozens of back-and-forth emails, and limited visibility during the test itself. Not to mention, you're stuck going through this pain-staking process every time you want to kick off a test. Good news: It doesn't have to be this way.

Cobalt offers a flexible, on-demand consumption model to meet your modern pentesting needs. With Cobalt's Pentest as a Service (PtaaS) solution, you can purchase credits in advance that can be easily redeemed throughout the year for continuous pentesting. Even more, Cobalt offers different packages to best suit your testing goals.

Cobalt Packages

PtaaS for security and development teams of all shapes and sizes

Standard	Premium	Enterprise
For teams in need of a speedy, annual pentest to meet a compliance need or client request.	For teams looking to build a structured pentest program to meet compliance needs and improve overall security.	For teams looking to scale their pentest programs to meet compliance needs, increase testing frequency & improve overall security.

"The main benefits that we get from Cobalt are speed, scalability, and repeatability. We're able to quickly launch and execute pentests; and beyond that, we're able to see individual findings in real time and relay them to the engineering team so they can start triaging immediately."

Eric Galis - CISO, Cengage

Onboarding		Security + 1 Dev Team	All Teams
Strategic Planning		Annual	Quarterly
Quarterly Maturity Assessment			✓
Custom Pentester Requests (Geo, Time Zone, Testing Windows)			✓
Credit Rollover			Up to 10%

Cobalt Credits

A Cobalt Credit is a standardized unit of work that represents 8 pentesting hours. Credits provide flexibility in both planning and executing pentests. They are sold in annual packages that include asset scoping, retesting, unlimited platform access, and more.

You can think of a Cobalt Credit as a virtual voucher that you consume whenever a pentesting need arises, meaning you can get a pentest up and running within days, compared to weeks with traditional services. Instead of being tied to a traditional 'all in scope' assessment, you can tailor and distribute the amount of work based on the complexity of your asset(s).

Cobalt Credits provide the comfort of purchasing in advance for flexible, on-demand consumption throughout the year.

1 Cobalt Credit = 8 pentesting hours

Cobalt Credits are sold in annual packages

"We have the flexibility to change plans, and choose the type of engagement that we want to execute. To me, Cobalt is a pentest platform that connects me to the best pentest talent."

Sergey Stelmakh - Principal Security Architect, Mulesoft
