

Secure Code Review

Overview

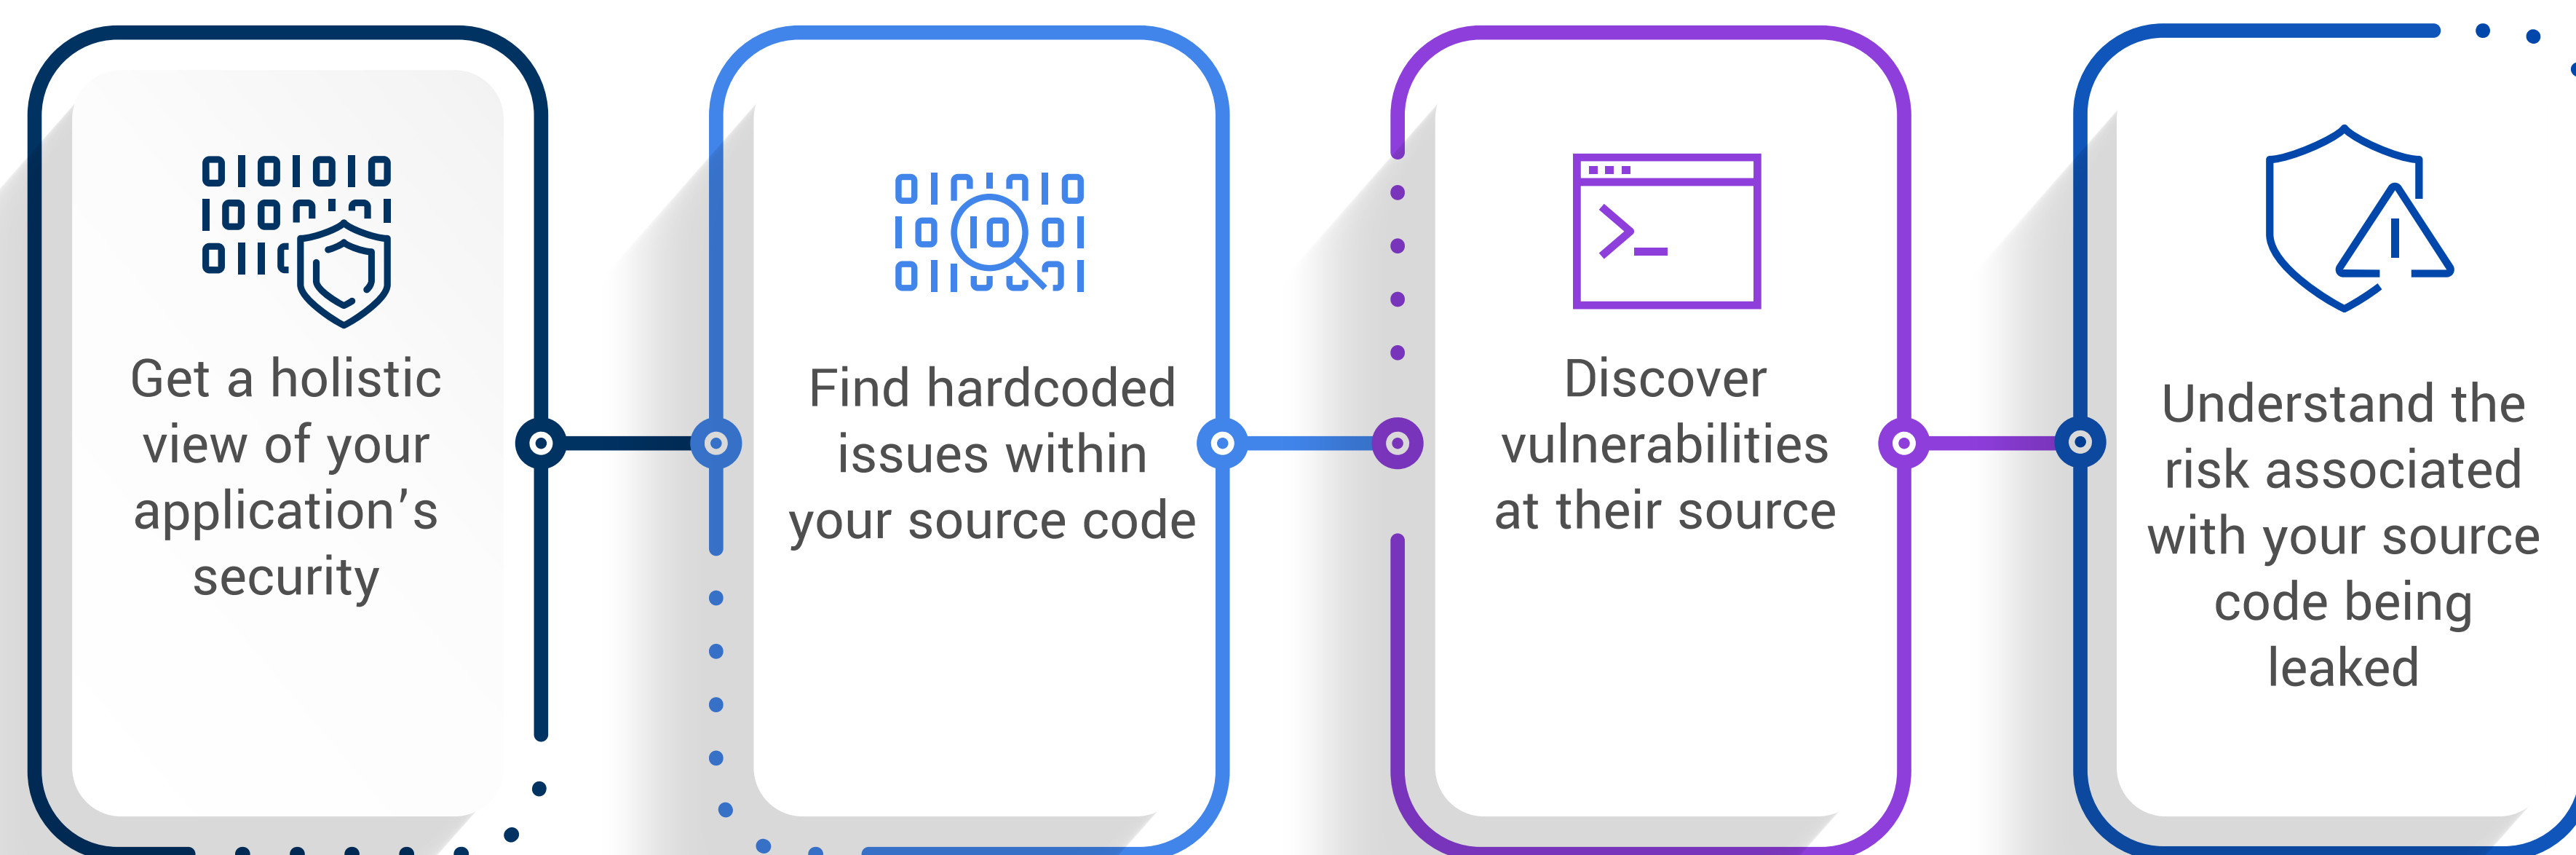

Your software's source code is incredibly valuable.

Not only does it contain all of the critical details of your application's functionality, it also holds insights into hidden, exploitable vulnerabilities.

Software Engineers work in fast-paced, agile environments. This can inevitably lead to coding mistakes that introduce vulnerabilities and increase your cyber risk. Our experienced engineers can skillfully review your code to identify these vulnerabilities and prevent a future breach.

Adding a Secure Code Review to a Cobalt Pentest gives pentesters the necessary context they need to dig even deeper and provide even more coverage, resulting in a more detailed, comprehensive view of your application security.

Key Benefits

Offering Details

Our security experts will define the scope of work and timelines before kicking off the testing process. Testing is transparent and collaborative - you'll have consistent communication with our engineers through Slack.

At a high level, here's what you can expect from a Secure Code Review engagement:

Before	During	After
<p>Before the Secure Code Review begins, we'll have an initial discussion with you to scope the project and timelines. All testing will happen over an agreed period of time, and within the determined methodology.</p>	<p>During testing, we provide ongoing updates and communication through messages through Slack.</p>	<p>At the end of the engagement, we'll deliver your test results and reporting and discuss them in a detailed readout.</p>

Cobalt Cybersecurity Services
Your partner beyond the pentest

Don't see what you need? If you can dream it, we can build it.
